# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

\*\*\*High Risk for Far Eastside and eastern portions of the Northern Sierra PSA's due to gusts to 30 mph and low RH through Sunday\*\*\*

\*\*\* W-NW Gusts 20-30 mph through Coast Range Gaps and Passes into Western Sacramento Valley in the afternoons and evenings through Sunday\*\*\*

A trough moving inland over the Pacific Northwest will weaken the ridge of high pressure over California causing winds to increase. Gusty SW-W-NW winds of 20 to 30 mph will surface across areas east of the Cascade-Sierra Crest as well as through the gaps in the coastal mountains in the afternoons and evenings through Friday. The strongest gap winds, up to 35 mph, should occur tonight through the coastal mountains. The gusty winds will be accompanied by low humidity which includes upper single digits and teens during the afternoon's and 30% to 50% at night. Temperatures will only cool a degree or two each day through Friday and remain a little above normal. Maximum temperatures will remain in the mid 80s to mid 90s across the mountains and mid 90s to around 105 in the valleys today.

The trough over the Pacific Northwest will drop down into Northern California bringing some noticeable cooling to the area along with a slight increase in afternoon humidity this weekend. This trough will also bring some increase in nighttime humidity recovery. The gusty SW-W winds along and east of the Cascade-Sierra Crest will increase another 5 to 10 mph during the afternoon and evening hours, thus the High Risk was extended. There will be a significant decrease in wind early next week as high pressure expands westward back into California from New Mexico. This ridge will also bring a warming trend and low humidity with the exception of along the coast early next week.

## **SOUTHERN CALIFORNIA**

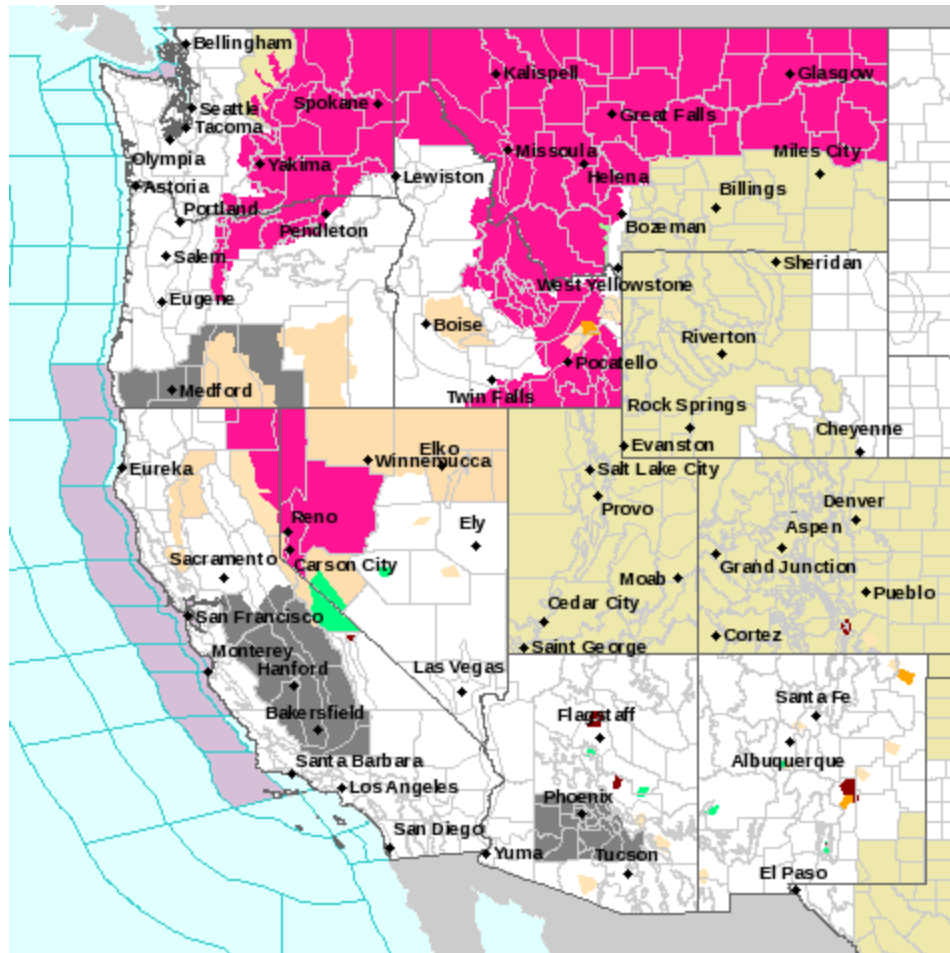

\*\*\*Thunderstorms decreasing in coverage today and Friday\*\*\*

\*\*\*Breezy and cooler this weekend\*\*\*

A downward trend in thunderstorm activity is expected through Friday as monsoonal moisture departs the area. There will be scattered wet thunderstorms over the Sierras and Inyo N.F. as well as the Cleveland and San Bernardino National Forests. These storms will be of short duration and should dissipate by sunset. Thursday and Friday, only a handful of storms can be expected in these areas. Temperatures today will still be very warm with highs of 98-104 in the valleys and up to 115 in the low desert, but a trough to our north will escort cooler afternoon temperatures into the state later this week. Onshore flow will increase and it will be breezy along the central coast and desert interface areas where winds of 15-30 mph will be possible during the afternoon hours Thursday and Friday. Over the weekend, expect temperatures to be near normal with highs in the 90s in the valleys with more widespread marine layer coverage. No thunderstorms are expected this weekend into Monday. However, a high pressure area may redevelop over Arizona which will likely bring a return of warmer weather along with scattered wet thunderstorms by next Tuesday or Wednesday.
